

Pokemon Go is a very popular but yet hated game. The purpose of the game was for people to exercise but it is also very dangerous, and it would be better to just stay away from the app. According to Source A, B, D. Pokemon Go is dangerous, uses a lot of data, and shares information to others which could be misused

First, Pokemon Go can be very dangerous and misleading. Pokemon encourages players to wander through unknown places that might be unsafe. Players get lost by wandering of into places they have never been. According to source A it states, that people are testing their luck by going to hard to reach place hoping to find a rare pokemon. The game alone allows Pokemon to appear pretty much anywhere and players are thinking that the more difficult it is to reach a location the more rare the Pokemon will be. Pokemon Go distracts people from the real world because they're always looking at there phones. According to Source D it says that News reporters that players are being distracted by the game causing accident like tripping crashing, falling, and many more dangerous incidents.

Next, Pokemon Go may be fun but you are probably aware of how much data is draining. While you are of on the streets having a good time on the free Pokemon Go app while really it is not free you have to pay for all the data you are wasting on the app. People can travel as far as they want as long as they are using their data. According to source A it says that you can pretty much go anywhere and as far as you wasnt as long as you have internet access. So you can go across the state playing Pokemon Go but the fun stops when you have used up all precious data on your phone or your phone runs out of battery. Pokemon Go receives tind if Data and the company is keeping it. According to source B it states that the company makes it so that you have to use a lot of data . They are taking advantages that you have to pay for data which is just another reason not to play game.

Lastly,When you agree to the terms of service you're giving away information that can be useful for robbers to locate you while you're playing the game. Say that you are playing and someone use the GPS to find you they can mug you and you will you will never see it coming because you're playing Pokemon Go the whole time.Pokemon go uses Google Maps and that's good because it's a more accurate map when you're playing but it's also good for the people who want to rob you. According to Source A it says that they use your real GPS to direct you to the Pokemon that you can catch but the information it is using can be accessed and used for bad.So if you're playing near a store and someone is a couple blocks away they sees an opportunity to rub you. Police are informed of the situation and know that people can access your location. according to sources the it says that the on Twitter a warning was sent out by a police department in Philadelphia that a group of robbers are using Pokemon go to find their victims. So now that the police are involved you may think it's safe but it is just a warning to try to let you know to stay safe on the streets. But why take the risk instead just take the easy way out and don't play the game.

To conclude the game is very unsafe really there's no reason to play it. Yeah it's meant to help you exercise but there are too many risks for you to take so if you plan on taking the risk of playing this Dangerous Game, which waste is your data, and give your information so no people that can cause you harm then that's your decision to make. Some people may argue that it's a motivational way to exercise, yeah that may be true but it also motivates you to go into unwanted locations and distract you from The Real World causing you to trip, fall, crash and many more unwanted harmful incidents
